

TECHNICAL DATA SHEET

Appearance: Colorless liquid

Composition: Slow solvents, additives

Viscosity: Similar to water

WB THINNER

WB Thinner is used as an additive to improve the properties of water-based paints. In addition to improving application properties, it ensures more even paint absorption, reduces paint consumption, minimizes overlapping marks, and contributes to a more uniform and aesthetically pleasing final finish.

It improves the performance of paints, especially in the second coat, and reduces visible transitions between layers. It also helps extend drying time, which is particularly beneficial for decorative painting techniques. The thinner enables better spreading and more even absorption of the coating, especially on challenging substrates.

At temperatures above 28°C, WB Thinner is an essential product. Recommended dosage ranges from 5% to 25%, depending on the product and application method.

Storage:

Store in dry and ventilated areas at temperatures between +5°C and +25°C.

Packaging:

1 L
